

**Reduction in infectious diseases:
What could have effected this change?**

Task:

1. Gather your thoughts and ideas about the question, individually and without discussion within the group. Write down your results in the margins of the placemat straight in front of you.

(2 minutes)

2. Present the notes you have made to the group. You should then all agree on some (for example, three) essential aspects. Write these down in the centre of the placemat.

(2 minutes)

3. Present your group results from the centre of the placemat to the others.
